DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 2, and 3 are rejected under 35 U.S.C. 103(a) as being obvious over Schalk et al (U.S. Pat. 6,749,298) in view of Silverbrook (U.S. Pat. 6,588,952).

The applied reference has a common inventor with the instant application. Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art only under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 103(a) might be overcome by: (1) a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not an invention "by another"; (2) a showing of a date of invention for the claimed subject matter of the application which corresponds to subject matter disclosed but not claimed in the reference, prior to the effective U.S. filing date of the reference under 37 CFR 1.131; or (3) an oath or declaration under 37 CFR 1.130 stating that the application and reference are currently owned by the same party and that the inventor named in the application is the prior inventor under 35 U.S.C. 104, together with a terminal disclaimer in accordance with 37 CFR 1.321(c). This rejection might also be overcome by

Application/Control Number: 10/760,275 Page 3

Art Unit: 2853

showing that the reference is disqualified under 35 U.S.C. 103(c) as prior art in a rejection under 35 U.S.C. 103(a). See MPEP § 706.02(l)(1) and § 706.02(l)(2).

Schalk et al discloses:

- regarding claim 1, a printhead auxiliary member arranged to selectively perform a number of different functions in respect of the printhead (Column 4, Lines 5 30)
- transmission assembly arranged to selectively engage and drive the printhead auxiliary member (Column 6, Lines 63 68; Column 7, Lines 1 3; Claims 26 and 30)
- regarding claim 2, wherein the transmission assembly includes a drive shaft and is arranged to engage and disengage with the printhead auxiliary member upon rotation of the drive shaft in first and second directions respectively (Column 1, Lines 45 60; Claims 30 and 31)
- **regarding claim 3,** a flipper gear assembly comprising: a first gear (104) fixed to the drive shaft; a second gear (106) radially displaced from the first gear (104); a locating member (1021, 1022) retaining the second gear (106) and the first gear (104) in a meshed configuration (Figure 4; Column 5, Lines 56 61)

Schalk et al does not disclose expressly:

- **regarding claim 1,** a printer cradle complementary to an inkjet cartridge of a type including a pagewidth printhead

Silverbrook discloses:

- **regarding claim 1,** a printer cradle complementary to an inkjet cartridge of a type including a pagewidth printhead (Column 1, Lines 44 – 48;

Application/Control Number: 10/760,275

Art Unit: 2853

Column 2, Lines 48 - 67; Figure 7). For the purpose of printing various types of ink one line at a time on the print media without traversing the print media.

Page 4

At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to incorporate the teaching of a printer cradle complementary to an inkjet cartridge of a type including a pagewidth printhead as taught by Silverbrook into the device of Schalk et al. The motivation for doing so would have been to print various types of ink one line at a time on the print media without traversing the print media.

Art Unit: 2853

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jason Uhlenhake whose telephone number is (571) 272-5916. The examiner can normally be reached on Monday - Friday 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Stephen Meier can be reached on (571) 272-2149. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
